DETAILED ACTION

Claim Objections

Claims 6 and 7 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend on another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim 6,7 not been further treated on the merits.

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. PCT/JP04/11,657 filed on 08-06-2004. ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over either JP 2001-115,267 or Pennington 5,866,986, in view of JP 10-298,787. Both JP 267' and Pennington teach plasma processing systems having microwave plasma generation in a plasma chamber with light shielding as claimed. See element 109 in JP 267' or column 5, line 65 in Pennington, which teaches prevention of light from reaching the substrate. These references do not teach use of an L-shape or non-perpendicular pipe for the microwave, as claimed.

This feature is clearly taught in JP 787', showing l_shaped microwave pipe 14 feeding into the plasma chamber. In view of this teaching the artisan would have been motivated to use an L-

shaped microwave for the chamber, this particular shape taught as conventional and creating effective plasma. As per claim 2 the first tube 14 in JP 787' is tilted 90 degrees to the substrate, as claimed. use of a light absorber in the tube as per claim 7 is a matter of design, so long as the light is blocked from direct line of sight to the substrate.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bell et al, Gaynor and Powell et al are cited for disclosing microwave plasma systems of interest to the disclosed invention.
